As part of their ongoing commitment to improve their logistical services to customers, ALS Environmental are pleased to announce that they are opening a new drop off location in Otterbourne from Thursday 5th May 2016. The site will soon be home to a new laboratory that will undertake analysis of samples for Microbiology for commercial customers.

ALS Environmental have a range of drop-off locations situated throughout the UK, including a service centre in Dublin, Ireland. Their drop-off locations can be found by using their Postcode finder service
, which will enable clients to find their nearest drop-off.

The addition of the Otterbourne location to their portfolio of drop-off locations means they now have in excess of 25 locations around the UK. Open between 09:00- 16:30 Monday - Friday, Samples will be collected after 17:00 from our Otterbourne site and registered at their Coventry laboratory prior to commencing analysis the following morning.

For a comprehensive list of the available drop of locations, please click here .

In response to the announcement of the Otterbourne drop-off location, Grace Coiley, Project Manager for the Southern Water contract comments:

The opening of the Otterbourne drop-off in conjunction with the opening of the laboratory in the

summer are the final acts in putting laboratory services in the South East of England. We have now undertaken our UKAS assessment on the site and hope to be able to process commercial samples at the laboratory from late Summer 2016.
In order to drop off samples at our Otterbourne facility, please call customer services to obtain a consignment number, this allows us to track and trace your samples right to the laboratory.

To Arrange a Collection , Request a Quotation or for any other enquiry, please contact ALS or call your
Customer Service Co-ordinator
