

We are ranked as one of the top ten Engineering Schools in the UK for research, and we are ranked top in the UK for the impact of our research (Research Excellence Framework 2014). We have strong links with industry and we work with companies across the world.

The combination of excellent research credentials and close ties with global engineering firms has drawn students from the UK and around the world to embark on our postgraduate courses.

The School places great importance on industrial involvement in both the development and practice of its postgraduate programmes which means that you will often be able to work on real industrial problems as part of your MSc project.

Our established MSc courses are accredited by the relevant professional engineering institutions and so fulfil the requirements for further learning if you are interested in becoming a chartered engineer.

If you are interested in updating your skills and qualifications in engineering with an environmental focus, then these MSc courses may be for you.
