Leading Japanese Knotweed Management company, IVM Invasive Vegetation Mangement & Treatment Ltd, are now an active member of the National Symbiosis Program – NISP (www.nisp.org.co.uk).

The program supports central Government to reduce the carbon footprint for eradication of invasive plant species throught the United Kingdom.

IVM themselves have diverted in excess of 768,000 tonnes of material going to lanfill due to their insitu application of herbicide (IVM FAST "Foliage and Stem Treatment" System) to Japanese Knotweed. In their words, "this is not control, this is complete eradication".
