

O'Donovan Waste is thrilled to announce that it has successfully added hazardous waste management to its already comprehensive portfolio of wide-ranging waste services. The new hazardous licence will allow the award-winning business to handle an array of different hazardous materials such as asbestos sheeting, paints, aerosols and other chemically contaminated wastes. O'Donovan will deal with the hazardous materials from 'cradle to grave' including free site visits, completion of required legal documentation, the provision of instructions for different wastes segregation as well as the transportation and final disposal requirements.

The industry leading business has a huge reputation for compliance, safety and above all, service excellence. The addition of a new hazardous licence will be hugely beneficial to its expansive client-base by providing further reliability and peace of mind with the assurance that the correct classification and regulatory paperwork is in order. O'Donovan will also manage the provision of drums, containers, vessels, storage, transportation and the completion certification documenting the treatment/recovery/disposal for all hazardous materials managed. O'Donovan are not only adding to the hazardous waste infrastructure in London, but also helping to achieve an improved carbon footprint for clients by reducing the miles travelled. The West London site situated near Hanger Lane/A40 will also accept hazardous waste from clients, once all pre-acceptance procedures have been adhered to and there will be a dedicated team to offer support to clients

Shane Brown, Operations Director commented "We are really happy to launch this specialist service to our clients. It has been a long, hard road to obtain this licence change, but it will be worth all the 'blood, sweat and tears' to finally be able to offer such an elite service to the industry. Our team of experts are well versed in dealing with the huge amount of compliance and legislative requirements that goes hand in hand with being a waste management business and the addition of the hazardous waste service will complement and consolidate our 'cradle to grave', giving clients the peace of mind and simplicity that we can take the headache away from the client and provide the reassurance that the treatment and disposal of hazardous materials is in safe hands."

The expansion of the new hazardous waste service will be controlled from the company's Alpertons Lane depot, which is a state-of-the-art, 24-hour material processing facility near Hangar Lane, West London. The £15m three-acre site will further enhance O'Donovan's processing capacity which already boasts an enclosed material reception and recycling facility that sorts and processes a myriad of construction and demolition waste into reusable, recoverable and recyclable materials, ensuring 100% of the waste is diverted from landfill.
