

The new, improved Daikin Altherma LT split range of air to water heat pumps, from Space Air Solutions of Guildford, is not only more efficient than the range it replaces but has achieved accreditation to Appendix Q of SAP. Daikin Altherma products and Space Air Solutions are also MCS Accredited.

SAP assessors can now use actual equipment performance figures rather than default ratings, when assessing the performance of a building.

Daikin Altherma's SAPQ accreditation applies to the complete 4kW to 16kW Split LT range.

For social housing providers these systems not only reduce energy consumption and carbon emissions but importantly for their tenants, reduce fuel bills.
