

OTT Hydrometry (UK) will unveil a new groundwater monitor, a new portable flow meter and a new range of dataloggers at WWEM 2012. OTT MD Simon Wills says “This will be a very exciting event because we will be launching new technologies in almost every area of hydrometeorology.”

OTT’s stand (No. 105) will feature the ‘OTT netDL’ (internet datalogger) series, which have been designed to improve remote monitoring by making communications easier, more reliable and less expensive. Discharge monitoring will be a major theme, with the new OTT MF Pro electromagnetic current meter offering an alternative to propeller and ADC meters. New technology will also be on show for groundwater monitoring including the new ecoLog 500 and the ecoLog 800 (CTD).

OTT will also run a Workshop entitled: “Using Technology to improve groundwater data quality” which will feature some of the new technologies that will be launched at the event.
