

Accelerated Technology Laboratories, Inc. (USA), a supplier of Laboratory Data Management Solutions and Accelerated Technology Laboratories (ATL) European partner, the Institute for Consulting and Data Handling (iCD), will again be exhibiting together in booth #1809 at PITTCON, March 17 - 21, 2013, at the newly expanded Pennsylvania Convention Center in Philadelphia, PA.

ATL will be unveiling its new Sample Master iLIMS - a 100 percent web-based version of our Sample Master LIMS, built on .NET framework. Sample Master iLIMS boasts a brand new look and feel, perfect for those organisations with multiple US locations or global operations, and an interest in utilising tablet technology (iPad, Samsung Galaxy, Trimble, etc.). The software will leverage the modularity and user friendliness for which Sample Master has become known, with additional new features and integration with the latest version of Result Point.

Additionally, ATL will be featuring its revolutionary Laboratory Enterprise Resource Planning (ERP) system, TITAN, representing the next generation in LIMS. TITAN leverages nearly two decades of laboratory informatics expertise to define the new standard, offering a feature-rich user experience and increased productivity through streamlined work processes. TITAN is highly configurable and provides users the ability to tailor LIMS business rules to match their organisations' requirements.

iCD will exhibit solutions including LABS/Q, a market-leading LIMS for the pharmaceutical and process manufacturing industries, and LABS/QM for SAP integration along with instrument integration via LABS/QM. iCD will also be exhibiting VALIDAT, the premier method validation software used by top pharmaceutical firms worldwide, which provides statistical analysis, automatically generates regulatory reports and graphics with full regulatory compliance, and walks users through various checkpoints including precision, accuracy, linearity, etc. iCD will also display its software for mobile devices (Apple, Samsung, etc.).

The Food Safety Tech and The Pittsburgh Conference on Analytical Chemistry and Applied Spectroscopy have formed a strategic partnership, which will include the co-location of the Food Labs Conference in conjunction with Pittcon 2013. The Food Labs Conference will be held March 19-20, 2013 in Room 201C at the Pennsylvania Convention Centre. This conference takes a holistic approach to best practices in managing food testing and analyses needs.
